A Near-term Proposal

Sept. 7, 2006 K. Oide(KEK)

- Merge amorita branch into the main trunk:
  - Easier installation, more systematic portability.
  - Dynamic loader: a key to extendability by user's.
    - ✓ Define and run user's function with native speed.
    - ✓ CSR, space charge, cooling, insertion devices...
    - ✓ Construct libraries contributed by users.
    - ✓ It will not be difficult to include some of them into SAD standard, if they are valuable to general users.
  - And more to come.... Why do you hesitate?

- More communication:
  - SAD Wiki, manuals, etc.
  - Remote debugging environment by sadists may be helpful.
  - Introductory seminar of SAD is possible, esp. for J-PARC people. (For myself, after mid. November will be fine.)
